

***NATIONAL WEATHER SERVICE ALASKA REGION SUPPLEMENT 07-2002
APPLICABLE TO NWSI 10-515
JANUARY 13, 2004***

***Operations and Services
Public Weather Services, NWSPD 10-5
WFO Non-Precipitation Weather Products Specification, NWSI 10-515
ALASKA WFO NON-PRECIIPITATION WEATHER PRODUCTS SPECIFICATION***

NOTICE: This publication is available at: <http://www.nws.noaa.gov/directives/>.

OPR: W/AR1x2 (A. Devaris)

Certified by: W/AR1 (J. Partain)

Type of Issuance: Routine.

SUMMARY OF REVISIONS: This supplement supercedes Alaska Region Supplement 07-2002, “Alaska WFO Non-Precipitation Weather Products Specification,” dated January 7, 2002, applicable to NWSI 10-515.

- 1) Updated the Winter Storm Outlook example in Appendix B (Special Weather Statement) to a segmented format.
- 2) Included an exception to the “Order of Segments” instructions for Winter Weather Warnings (Section 5.3.4.2c).
- 3) Removed instructions regarding headline format. National procedures in NWSI 10-513 are to be followed.
- 4) Removed wind chill advisory and warning criteria in Appendix A. This element was moved from WFO Non-Precipitation Products (NWSI 10-515) to WFO Winter Weather Products (NWSI 10-513).
- 5) Updated examples in Appendix B to reflect new zone names and to include the NWS attribution line, where applicable.

The section numbers in this supplement refer to the section numbers in NWSI 10-515.

 Appendices	
A. Zone Specific Non-Precipitation Weather Advisory and Warning Criteria ..	A-1
B. Non-Precipitation Weather Product Examples	B-1

3. Non-Precipitation Outlook (product category SPS).

3.2 Issuance Guidelines.

3.2.2 Issuance Criteria. WFOs should issue Non-Precipitation Outlooks when conditions are favorable for a non-precipitation hazardous weather event to develop over part or all of the forecast area in the three to five day forecast period, or beyond the point normally covered by a watch. Non-Precipitation Outlooks are issued when there is a **60 percent or greater** chance of a hazardous non-precipitation weather event exceeding the local criteria.

3.2.2.1 Non-Precipitation Outlook Products. WFOs will issue the following non-precipitation outlook products:

Outlook Product Name	Issuance Criteria
Extreme Cold Outlook	Extreme cold forecast to exceed local Extreme Cold Warning criteria in the next three to five days.
Freeze Outlook	Freeze event forecast to exceed Freeze Warning criteria in the next three to five days during the frost/freeze season.
High Wind Outlook	High wind event forecast to exceed High Wind Warning criteria in the next three to five days.

Table 1 – WFO Outlook Products

3.3 Technical Description.

3.3.3 Mass News Disseminator (MND) Product Type Line. The Non-Precipitation Outlook MND line will include one of the following product names:

- a. “EXTREME COLD OUTLOOK”
- b. “FREEZE OUTLOOK”
- c. “HIGH WIND OUTLOOK”

4. Non-Precipitation Watches (product category NPW).

4.2 Issuance Guidelines.

4.2.2 Issuance Criteria. WFOs will issue a Non-Precipitation Watch when conditions are favorable for a hazardous non-precipitation weather event to develop over part or all of the forecast area, but the occurrence is uncertain. WFOs should issue Non-Precipitation Watches for the second, third, or occasionally fourth forecast periods, when there is a **60 percent or greater** chance of a hazardous non-precipitation weather event meeting or exceeding local warning criteria.

4.2.2.1 Non-Precipitation Watch Products. WFOs will issue the following non-precipitation watch products:

Watch Product Name	Issuance Criteria
Extreme Cold Watch	Conditions are favorable for an extreme cold event to meet or exceed local Extreme Cold Warning criteria in the next 12 to 48 hours.
Freeze Watch	Conditions are favorable for a freeze event to meet or exceed local Freeze Warning criteria in the next 12 to 48 hours during the frost/freeze season.
High Wind Watch	Conditions are favorable for a high wind event to meet or exceed local High Wind Warning criteria in the next 12 to 48 hours.

Table 2 – WFO Watch Products

5. Non-Precipitation Weather Warnings (product category NPW).

5.2 Issuance Guidelines. The WFO Shift Supervisor may authorize a WSO in the WFO's service area to issue warning and advisory products for selected zones. All warning and advisory statements prepared by the WSO must be coordinated with and agreed to by the Shift Supervisor before they are disseminated. The coordination and concurrence should be documented in the duty logs and/or warning checklists at the WFO and WSO.

The WSO staff should contact the area WFO Shift Supervisor when, in the opinion of the WSO staff, warning or advisory conditions are likely and there is no warning or advisory in effect or being coordinated by the area WFO. Reports of event approaching or achieving warning or advisory thresholds in or near the WSO service area are useful as evidence. The WFO should coordinate with the WSO and resolve any proposed WSO actions within 15 minutes of the initiated contact or as soon as completion of other higher priority actions permits.

There may be occasions at a WSO when the coordination and concurrence cannot be accomplished in a timely enough manner to support the protection of life and property. In this case, the WSO should issue the warning product and accomplish the coordination and concurrence as soon as contact can be made with the WFO Shift Supervisor.

5.2.2 Issuance Criteria.

5.2.2.1 Non-Precipitation Warning Products. WFOs will issue the following non-precipitation weather warning products:

Warning Product Name	Issuance Criteria
Dust Storm Warning	Widespread or localized blowing dust reducing visibility to 1/4 mile or less for at least three hours. Sustained winds of 25 mph or greater are usually required.
Extreme Cold Warning	Air temperatures exceeding locally defined criteria for a prolonged period of time.
Freeze Warning	Minimum shelter temperature forecast to be 32°F or less during the frost/freeze season. The frost/freeze season is locally defined and usually spans the growing season until the first hard freeze (>28°F) occurs toward the end of the season.
High Wind Warning	Wind speeds forecast to meet or exceed locally defined warning criteria.

Table 3 – WFO Warning Products

Warning and advisory thresholds for non-precipitation weather hazards for all Alaska zones are given in Appendix A.

5.3 Technical Description.

5.3.4.2 Segmented Forecast Information.

c. Order of Segments. Winter weather warnings are placed second in the order of segments. This order was designed to place the most important and/or time sensitive information near the beginning of the message. The order of segments is:

- (1) Cancellation
- (2) Warnings**
- (3) Advisories
- (4) Watches

Exception: If a new warning is being issued with very little lead time, generally 3 hours or less, the warning should be placed at the beginning of the message ahead of cancellations.

6. Non-Precipitation Weather Advisories (product category NPW).

6.2 Issuance Guidelines.

6.2.2 Issuance Criteria.

6.2.2.1 Non-Precipitation Weather Advisory Products. WFOs will issue advisories based upon regionally and locally defined criteria by headlining the Zone Forecast Product (ZFP).

To supplement the information provided in the ZFP headline, WFOs may issue non-precipitation weather advisory products. These products are used to elaborate on the timing and intensity of hazardous weather events, and they should be issued for events that are expected to affect transportation and commerce or will otherwise impact the public in such a way that additional forecast or call-to-action information is needed to support public safety. Advisory products are particularly useful for early or late season events and for events that are climatologically unusual or infrequent. WFO Management should determine which, if any, condition (e.g., ashfall advisory) should require the issuance of an advisory product in their area of responsibility, and this information should be documented in the Station Duty Manual.

WFOs may issue the following non-precipitation weather advisory products:

Advisory Product Name	Issuance Criteria
Ashfall Advisory	Volcanic ashfall present or expected at the ground and in the air.
Blowing Dust Advisory	Widespread or localized blowing dust reducing visibility to 1 mile or less for at least one hour. Winds of 25 mph are usually required.
Dense Fog Advisory	Widespread or localized fog reducing visibility to 1/4 mile or less for at least one hour.
Dense Smoke Advisory	Widespread or localized smoke reducing visibility to 1/4 mile or less for at least one hour.
Wind Advisory	Wind speeds forecast to meet or exceed locally defined advisory criteria for at least one hour.
Frost Advisory	Minimum shelter temperature forecast to be 33-36°F during the frost/freeze season, on nights with good radiational cooling conditions (e.g., light winds and clear skies). The frost/freeze season is locally defined, based upon the growing season.

Table 4 – WFO Advisory Products

Warning and advisory thresholds for non-precipitation weather hazards for all Alaska zones are given in Appendix A.

The WFO Shift Supervisor may authorize a WSO in the WFO's service area to issue advisory products for selected zones. For more information, see Section 5.2 above.

**APPENDIX A - Zone Specific Non-Precipitation
Weather Advisory and Warning Criteria**

Zones (WFO)	Advisory Threshold	Warning Threshold
Volcanic Ashfall		
All Zones	No minimum threshold. Volcanic ashfall present or expected at the ground and in the air.	None
Blowing Dust		Dust Storm
All Zones	Widespread or localized blowing dust reducing visibility to 1 mile or less , but greater than 1/4 mile for one hour or more.	Widespread or localized blowing dust reducing visibility to 1/4 mile or less for three hours or more.
Dense Fog		
All Zones	Widespread or localized fog reducing visibility to 1/4 mile or less for one hour or more.	None
Dense Smoke		
021-029 (Juneau) 101-195 (Anchorage)	Widespread or localized smoke reducing visibility to 1/4 mile or less for one hour or more.	None
222 (Fairbanks)	Widespread smoke reducing visibility to 1 mile or less for one hour or more.	None
201-221, 223-226 (Fairbanks)	None , but mentioned in ZFP.	None
Extreme Cold		
All Zones	None	Shelter temperatures -50°F or colder and air temperatures remaining below -40°F up to the 700-mb level for at least three days .

Zones (WFO)	Advisory Threshold	Warning Threshold
Frost		Freeze
021-029 (Juneau)	Minimum shelter temperature forecast to be 30-35°F between May 1 and the end of the growing season . The growing season ends when the first hard freeze (>28°F) occurs.	Minimum shelter temperature forecast to be 32°F or less for at least 6 hours and/or 28°F or less for any length of time between May 1 and the end of the growing season . The growing season ends when the first hard freeze (>28°F) occurs.
101 and 111 (Anchorage)	None	Minimum shelter temperature forecast to be 32°F or less between June 1 and September 15 .
201-221, 223-226 (Fairbanks)	None	None
222 (Fairbanks)	Minimum shelter temperature forecast to be below 35°F between June 1 to September 1 .	None
Wind		High Wind
021-029 (Juneau)	Sustained wind or frequent gusts of 40 mph – 59 mph	Sustained wind or frequent gusts of 60 mph or more
101-195 (Anchorage)	Sustained wind or frequent gusts of 45 mph – 72 mph	Sustained wind or frequent gusts of 73 mph or more
201-206, 222 (Fairbanks)	Sustained wind or frequent gusts of 35 mph – 49 mph	Sustained wind or frequent gusts of 50 mph or more
215-221, 223-226 (Fairbanks)	Sustained wind or frequent gusts of 40 mph – 49 mph	Sustained wind or frequent gusts of 50 mph or more
207-212, 214 (Fairbanks)	Sustained wind or frequent gusts of 40 mph – 59 mph	Sustained wind or frequent gusts of 60 mph or more
213 (Fairbanks)	Sustained wind or frequent gusts of 50 mph – 59 mph	Sustained wind or frequent gusts of 60 mph or more

...EXTREME COLD EXPECTED FOR INTERIOR ALASKA LATER THIS WEEK...

THE COLDEST WEATHER IN A DECADE IS APPEARING MORE AND MORE LIKELY
FOR MOST OF INTERIOR ALASKA LATE THIS WEEK AND INTO EARLY NEXT
WEEK.

HIGH PRESSURE BUILDING OVER THE BERING SEA WILL ALLOW VERY COLD
AIR THAT HAS BEEN OVER THE ARCTIC OCEAN NORTH OF ALASKA TO POUR
SOUTHWARD OVER THE REGION. COMBINED WITH CLEAR SKIES...
TEMPERATURES WILL DROP TO LEVELS COMPARABLE TO THOSE OBSERVED IN
LATE JANUARY AND EARLY FEBRUARY 1993...AND POSSIBLY APPROACHING
THE COLD SNAP OF LATE JANUARY 1989.

TEMPERATURES IN THE 60S BELOW ARE LIKELY ON THE YUKON FLATS AND
IN SOME VALLEYS IN THE KOYUKUK AND UPPER KOBUK BASINS BY FRIDAY
NIGHT. THE EXTREME COLD COULD PERSIST UNTIL AT LEAST MONDAY.

IN THE LOWER YUKON VALLEY...TEMPERATURES IN THE 50S BELOW ARE
LIKELY...ESPECIALLY NORTH OF GRAYLING. THE COLDEST PLACES COULD
SEE TEMPERATURES COLDER THAN 70 BELOW SATURDAY AND SUNDAY.

IN THE TANANA VALLEY...TEMPERATURES WILL BE STRONGLY DEPENDENT ON
HOW MUCH CLOUDINESS REMAINS OVER THE AREA FROM A PERSISTENT STORM
IN THE NORTHEAST GULF OF ALASKA. IN THE ABSENCE OF CLOUDS...
TEMPERATURES OF 40 TO 65 BELOW ARE LIKELY THIS WEEKEND. IF
CLOUDS PERSIST...TEMPERATURES WOULD BE 10 TO 30 DEGREES HIGHER.

IN THE FAIRBANKS AREA...DEEP COLD WILL BRING DENSE ICE FOG.
TEMPERATURES IN THE URBAN AREA ARE MODERATED BY THE ICE FOG...BUT
TEMPERATURES LOWER THAN 50 BELOW IN TOWN ARE LIKELY THIS WEEKEND

IF CLOUDS FROM THE STORM IN THE GULF OF ALASKA MOVE OUT OF THE AREA.

RESIDENTS OF NORTHERN AND WESTERN INTERIOR ALASKA SHOULD PREPARE NOW FOR AN EXTENDED PERIOD OF DEEP COLD THAT MAY SERIOUSLY DISRUPT AIR TRAVEL.
